PERSONAL AI FRAMEWORK MAP

Apply the consolidated framework to your real work.

Exercise

How to Use This Framework

The Consolidated Framework

All of Module 2's frameworks work together. **Green/Yellow/Red is your primary lens.** Everything else sits underneath it to validate and refine your calls.

Framework	Role	How to Use It
Green / Yellow / Red	Primary assessment	Use this first, always. Your gut-level categorization of every task you face.
New Hire Test	Gut-check validator	Would you hand this to a new hire on day one? Yes → Green. Maybe → Yellow. Never → Red.
DRAG	Validation sub-framework	Drafting, Research, Analysis, Grunt work — confirms whether a task is AI-appropriate and which prompt strategy to use.
Capped vs. Uncapped	Outcome framing	Is AI's output the ceiling (Capped) — or your starting point (Uncapped)?

The Three Categories

Accelerate — Green Tasks

AI handles end-to-end. Your role is direction and review, not execution. Output is **Capped** — AI's first pass is usually close enough. Typically DRAG tasks: Drafting first drafts, Researching and synthesizing, Grunt work like reformatting and reorganizing. Low stakes if AI gets it slightly wrong.

Assist — Yellow Tasks

You and AI collaborate. Your judgment is required at key points. The key question: is this task **Information** (just need accurate facts fast) or **Transformation** (you need to build the skill yourself)? Information → let AI drive. Transformation → you drive, AI coaches. Output is Uncapped — AI gives a starting point, your involvement elevates it.

Avoid — Red Tasks

AI should not lead these. Red tasks involve confidential or sensitive information, high-stakes judgment requiring accountability, situations where a mistake damages trust or legal standing, or work where your personal judgment is the entire value delivered.

The Three Levers

When any AI interaction isn't working, check these three levers in order. Most problems trace back to the first one.

Lever	Question to Ask	The Fix
Context *(~70% of problems)*	Did I brain dump everything — role, background, constraints, what "good" looks like?	Add more. More background, more constraints, more examples. AI doesn't need you to be organized. It needs you to be complete.
Task	Is this the right kind of work for AI? Does it pass the DRAG test and New Hire Test?	Check your Opportunity Matrix. If it doesn't pass, move it to Yellow or Red.
Mode	Am I seeking information, or do I need to build this skill myself?	Adjust your approach. Information → let AI drive. Transformation → you drive, AI coaches.

Go-Kart vs. Gym

This is the Mode lever made concrete. Both are valid. The question is which one serves your goal right now.

Go-Kart — Information Mode

You want to get somewhere fast. AI drives. You're a passenger receiving the output. Use this when you need accurate information quickly, the task is repetitive, speed matters more than personal development, or the skill isn't core to your professional value.

Watch for: Over-reliance. If you always take the go-kart, the skill atrophies. Know which skills you can afford to let go, and which you can't.

Gym — Transformation Mode

You're building something in yourself, not just getting an output. AI coaches or spots you, but you do the reps. Use this when the skill is core to your role, you're early in this area, your judgment is the value you deliver, or you've been avoiding developing this.

Watch for: Inefficiency. Don't go to the gym for tasks that don't build anything in you.

The honest question: "Am I choosing Go-Kart because it's the right call — or because it's easier?" Awareness of the difference is the whole game.

Framework Map — Examples

Use these to calibrate your own framework map. Notice how the DRAG type and Mode interact — they're not independent choices. They tend to move together.

Category	Task	DRAG Type	Mode	Your Role
Green	Draft a weekly status email from meeting notes	Drafting	Go-Kart	Provide bullet points + context. Review tone and accuracy. Send.
Green	Summarize a 40-page industry report into 5 key points	Research	Go-Kart	Upload document. Specify what matters. Verify key facts.
Green	Reformat meeting notes into organized action items	Grunt work	Go-Kart	Paste raw notes. Confirm output matches intent.
Yellow	Analyze sales data to find patterns and trends	Analysis	Gym	Run analysis with AI — then interpret the "so what" yourself.
Yellow	Write a client proposal	Drafting	Gym	AI drafts structure. You write the core argument and relationship context.
Yellow	Research a competitor's positioning	Research	Go-Kart	AI compiles the facts. You interpret what it means for your strategy.
Red	Write a performance review for a direct report	—	—	Your judgment, your accountability. AI can help with structure, not substance.
Red	Review a vendor contract for legal risk	—	—	Attorney reviews. AI can flag questions to ask — not assess final risk.
Red	Handle a confidential HR situation	—	—	No AI in the room. Never enter PII or private details into AI tools.

> **Why Red has dashes:** DRAG Type and Mode are blank for Red tasks — not because AI isn't capable, but because these tasks shouldn't be AI-led. The relationship or the liability lives in your hands, not a model's output. Keep them there.

Your Framework Map

Pull out your AI Opportunity Matrix from Module 1. You're not starting over — you're validating and deepening what you already mapped. Add 12–15 tasks from your actual work below.

Category G / Y / R	Task	DRAG Type D / R / A / G	Mode Go-Kart / Gym	Your Role

> **Tip:** Aim for at least 3 rows per category. If you can't fill in Red, that's data — ask yourself what sensitive or high-stakes work you're doing that AI should never touch.

Module 2 Defaults & Insights

My brain dump habit

When I need to give AI context, my go-to method will be:

- ☐ Voice memo — talk it out, then paste the transcript
- ☐ Bullet points — quick list, no organizing required
- ☐ Stream of consciousness — just start typing, don't edit first
- ☐ Other: _____

My test for AI work

In your own words — what's your personal rule for deciding whether a task goes to AI?

Go-Kart vs. Gym warning signs

How will you know if you're defaulting to Go-Kart when Gym mode would actually build something?
